EDUCATION

Bachelor of Science in Information Systems, Carnegie Mellon University

Aug 2020 – May 2024

Minor in Computer Science

GPA: 3.76 (Dean's List)

EXPERIENCE

Software Engineer II — Central AI (Rovo Growth & Search)

Jun 2024 – Present

Atlassian

San Francisco, CA (Remote)

- **AI Platform (current):** Started and lead a from-scratch service that turns a prompt template plus hydrated user data into a served model response — with offline evaluation and configurable LLM judges gating every deploy — exposing endpoints consumed directly by frontend surfaces. Also own the frontend and nudge-scheduling system for a personalized AI surface, spanning the application and Redis caching layers.
- **Rovo Chrome Extension (0-to-1 & Growth):** Built and scaled the extension (TypeScript, React) surfacing AI chat and enterprise search, growing it from **8K to 20K+ installs** at **~7K monthly actives**. Shipped the chat CTA driving **+74.5% extension DAU**.
- **Experimentation at Scale:** Shipped **15+ experiments** across Rovo's most prominent surfaces — Jira, Confluence and Townsquare — reaching a large share of Atlassian's production customer base. Drove **+45% Rovo button usage** and **+20.1% chat usage events**. Helped define the team's experimentation infrastructure (custom metrics, standardized Statsig tagging).
- **Technical Leadership:** De facto feature lead on **4 concurrent initiatives**, owning scoping, sequencing and experiment strategy across product, design and eng. **270 PRs, 500+ code reviews** across four repositories. Led cross-team Sev3 incident response; drove a migration removing **~\$10k/month** in cost.
- **Third-Party Connector Experience:** Own the frontend for third-party *connectors* — the integrations that let Rovo search and act across external tools — across every Atlassian surface. Built a generic 3P frontend config so a connector added on the backend needs no bespoke frontend work, and shipped a portable connector-settings package now consumed by other Atlassian teams including Confluence and Townsquare. Drove **+23.7% third-party auth completions** and turned a near-unused settings surface into a primary connect path.

Co-Founder & CTO

Oct 2024 – Apr 2025

Kreatify

San Francisco, CA

- **0-to-1, Bootstrapped:** Co-founded and built an influencer-management CRM SaaS for talent agencies — the middlemen between brands and influencers — (**Next.js, Supabase**), including OAuth onboarding, role-based access control, file handling, and Phyllo API integrations (YouTube, TikTok, Instagram).
- **Product & Systems Ownership:** Independently designed and built the UX, and owned multiple core systems including a Notion-style generic filtering engine. Ran user interviews and iterated to a private beta of **40+ users across 7 talent agencies**.

CS Teaching Assistant

Aug 2022 – May 2024

Carnegie Mellon University

Pittsburgh, PA

- Led recitations for 15+ cohorts, teaching the fundamentals of programming (Python) and database design.

Research Assistant — High-Frequency Trading

Jun 2020 – Feb 2022

Great Point Capital

Chicago, IL (Remote)

- Automated daily market-data extraction in Python, **cutting processing time 95%**, and built a reusable TensorFlow/Keras pipeline that lifted trading-signal accuracy 5%.

PROJECTS

- **Gooni (Agentic AI Workspace).** Engineered a full-stack AI workspace built around a custom **orchestrator**, a persistent **memory system** with extraction and reconciliation, and a self-built **evaluation harness** — then used those evals to cut what didn't earn its place, including a ReAct/Reflexion layer that failed to beat the simpler pipeline. One pass dropped **22 tables (-32,252 lines)** after the numbers stopped justifying them. Captures from web, Telegram and WhatsApp into a single log; deployed and in daily use. (*FastAPI, React/TypeScript, SQLite, Fly.io*)

SKILLS

Languages: TypeScript, JavaScript, Python, C, SQL, Java, HTML/CSS

AI: OpenAI API, Model Context Protocol (MCP), embeddings & vector retrieval, LLM evaluation & judges, prompt engineering, TensorFlow/Keras

Frameworks/Tools: React, Next.js, Node.js, Express, FastAPI, Supabase, PostgreSQL, Redis, Docker, Git, Statsig
